## Description

4PM was about creating high comfort from a hard material. The design language of the chaise is a combination of curved and flat parts and has been designed to provide the best possible comfort.

From above, the profile of 4PM tapers towards the footrest, which enables the feet to fall comfortably on both sides, something that also simplifies getting in or out. The horizontal footrest can also be used as a temporary seating area or a table surface.

The headrest in leather is adjustable in height and it is elegantly balanced on top of the backrest and is held in place by an enclosed steel weight.

4PM is available in two types of wood, Douglas fir which is characterized by its warm tone and fine grain and cherry which is slightly darker.
