

ALBERT BAR STOOL

Albert Bar Stool

AL-02 104 400

€622

Please note – prices do not include VAT.

Seat Height

650

mm

Finish

Red Lacquered Beech

Upholstered seat (optional)

Fabric Supplier

Specifications

Width: 380 mm

Depth: 380 mm

Weight: 5 kg

Seat Height: 650 mm

Information

Year: 2010

Description

A sturdy piece of furniture with legs that widen toward the footrest. Albert is a refined version of the iconic English pub stool which inspired it.

Through a lifecycle analysis with a focus on mass and energy the CO2 emissions from the production has been calculated to being carbon neutral, or more specifically - 0.1843 KG of CO2. Read more in our [Transparency Page](#).

Lead time 6 weeks.

Instructions

For cleaning of wooden surfaces, advantageously use a detergent, or mild pH neutral detergent and lukewarm water in a well wrung cloth. Then wipe off with clean water and wipe dry. To preserve the look and finish you should be aware not to use: – Alkaline or aggressive cleaners, – Solvent – Preparations containing abrasives, – Abrasive tools. Remember not to let the cleaners or other liquids on the surface for long. For furniture and surfaces for use in public spaces, it is also important to remember not to use disinfectants that contain a high concentration of alcohol or alkaline substances, such as 70% alcohol. There are disinfectants that can be advantageously used, but that does not affect the painted / varnished surface appreciably. Note that freshly painted surfaces are susceptible to scratching. Surface final resistance is only achieved after about a month. Tape and other foreign substances such as, for example, adhesive and moisturizers can soften the treated surface and cause peeling / paint drop. For cleaning of the fabric/leather, see instructions related to the specific fabric/leather in use.

Instructions for Fabric

Regular gentle vacuum cleaning helps to preserve the fabric's attractive colour and appearance. Wool is naturally resistant to dirt and fire. It is antistatic and attracts dirt to a lesser degree than other fabrics do. Dry wet spots with a piece of white kitchen roll. Scrape up dry, attached spots with a spoon. Most spots can be removed with lukewarm water possibly added a neutral detergent. It is a good idea to do a test where it will not show before applying a cleaning agent. Use only small quantities of cleaning agent at a time and dry up with absorbent paper as you work. If the spot does not disappear using water and a neutral detergent, follow the instructions in our guide to spots available on the website.

Should the need for disinfection arise, this can be done by washing at minimum 74°C or by wiping with ethanol. NOTE: This applies to Comfort+, Obika Leather+ and polyester and Trevira CS textiles only. The following is a quote from the report by the Danish SSI, Statens Serum Institut, "Advice and guidelines on disinfection in the health sector":

"In Denmark, ethanol at a concentration of between 70% and 85% (by volume) is recommended because it ignites more easily at higher concentrations. Ethanol vapours are less irritating to the eyes and mucous membranes and are not absorbed through the skin. Ethanol kills bacteria (e.g. tubercle bacilli), fungi and viruses (e.g. HIV, hepatitis B and C), but it has no effect on spores. Ethanol is easily inactivated by organic matter. Surfaces must therefore be cleaned prior to disinfection with ethanol." For safety reasons we recommend that instructions for use are made for the specific area of use.
