Description

Jig is a lightweight, robust and stackable armchair for commercial spaces and hospitality areas. It's made from twelve simple steel tubes that are joined together in a fresh design for an old typology.

Lead time 24 weeks.

Instructions

For cleaning of metal surfaces: Rinse with large quantities of water. Clean with wetting agent solution and use a sponge or soft cloth. Post-rinsing and drying. Specific instructions based on type of soiling: Greasy film can be removed with a concentrated wetting agent solution, alcohol or surfactant, after allowing the solution some time to break down the film before removing. Unidentifiable, stubborn dirt can be treated with facade cleaner (e.g., Ambruch2 www.ambruch.de) or Power Wipes www.interflon.net. Note: Special care should be taken with coatings that have a metallic, pearl mica or matte effect. The specific methods listed here should be tested accordingly for possible damage to the surface. For cleaning of the fabric/leather, see instructions related to the specific fabric/leather in use.

Instructions for Fabric

Dirt has an effect on the fire-retarding properties of the materials, so it is very important to regularly clean fabrics so dirt cannot be absorbed by the material. We advise the weekly care of upholstery fabrics by vacuum cleaning. Remove stains as soon as possible. You can immediately remove most stains by dabbing the dirt with an absorbent cloth. you can then let the dirt dry and vacuum it up, if this is not sufficient carefully treat the stain with a cloth that does not give off and luke warm water. If necessary use a cleaning agent suitable for the material concerned. Take advice on this.

Water does not affect the fire-retarding properties because this property is present in the yarns and is not added by finishing. You can wash or treat the fabrics with warm water. The fabrics dry quickly and do not lose their shape.
