## Description

Jig is a lightweight, robust and stackable armchair for commercial spaces and hospitality areas. It's made from twelve simple steel tubes that are joined together in a fresh design for an old typology.

Lead time 8 weeks.

## Instructions

For cleaning of metal surfaces: Rinse with large quantities of water. Clean with wetting agent solution and use a sponge or soft cloth. Post-rinsing and drying. Specific instructions based on type of soiling: Greasy film can be removed with a concentrated wetting agent solution, alcohol or surfactant, after allowing the solution some time to break down the film before removing. Unidentifiable, stubborn dirt can be treated with facade cleaner (e.g., Ambruch2 [www.ambruch.de](http://www.ambruch.de)) or Power Wipes [www.interflon.net](http://www.interflon.net). Note: Special care should be taken with coatings that have a metallic, pearl mica or matte effect. The specific methods listed here should be tested accordingly for possible damage to the surface. For cleaning of the fabric/leather, see instructions related to the specific fabric/leather in use.

## Instructions for Fabric

Some textiles can be washed. Preferably inside out. Depending on the product, please maintain a wool/hand wash program at 40°C. Make sure you spindry the textile with low speed (800 rpm). This way your textile will stay in good shape. However, please note that the colour and look can get slightly fuzzy. The textile should be dried flat to avoid losing its form. Do not tumble dry. Let the textile dry very carefully, especially the thick, padded textiles, as the filling can stay moist. Be aware of the fact that the textile can shrink slightly after washing. However the stretch feature compensates any shrinkage which may occur. For special upholstery we recommend dry clean only.

When stains occur, act as quickly as possible to keep your textile beautiful. Remove liquid stains by carefully dabbing with a clean cloth, preferably white. Do not rub. When rubbing too hard you can damage the textile and the colour may fade.

Most stains can be treated with soapy lukewarm water. Never use hot water as heat will set stains. We recommend using a PH neutral detergent. Rub the stain gently with a clean cloth and afterwards dab the textile dry with a dry cloth to absorb moisture and soil. Should a stain still occur we recommend you to use other detergents. But always test this on a discrete area of the textile first. Please note these are only recommendations. We can never guarantee complete stain removal. We always recommend contacting a professional cleaning company for additional advice regarding your stain. For more information see our website.
