Description

Jig is a lightweight, robust and stackable armchair for commercial spaces and hospitality areas. It's made from twelve simple steel tubes that are joined together in a fresh design for an old typology.

Lead time 24 weeks.

Instructions

For cleaning of metal surfaces: Rinse with large quantities of water. Clean with wetting agent solution and use a sponge or soft cloth. Post-rinsing and drying. Specific instructions based on type of soiling: Greasy film can be removed with a concentrated wetting agent solution, alcohol or surfactant, after allowing the solution some time to break down the film before removing. Unidentifiable, stubborn dirt can be treated with facade cleaner (e.g., Ambruch2 www.ambruch.de) or Power Wipes www.interflon.net. Note: Special care should be taken with coatings that have a metallic, pearl mica or matte effect. The specific methods listed here should be tested accordingly for possible damage to the surface. For cleaning of the fabric/leather, see instructions related to the specific fabric/leather in use.

Instructions for Fabric

Regular gentle vacuum cleaning helps to preserve the fabric's attractive colour and appearance. Wool is naturally resistant to dirt and fire. It is antistatic and attracts dirt to a lesser degree than other fabrics do. Dry wet spots with a piece of white kitchen roll. Scrape up dry, attached spots with a spoon. Most spots can be removed with lukewarm water possibly added a neutral detergent. It is a good idea to do a test where it will not show before applying a cleaning agent. Use only small quantities of cleaning agent at a time and dry up with absorbent paper as you work. If the spot does not disappear using water and a neutral detergent, follow the instructions in our guide to spots available on the website.

Should the need for disinfection arise, this can be done by washing at minimum 74°C or by wiping with ethanol. NOTE: This applies to Comfort+, Obika Leather+ and polyester and Trevira CS textiles only. The following is a quote from the report by the Danish SSI, Statens Serum Institut, "Advice and guidelines on disinfection in the health sector":

"In Denmark, ethanol at a concentration of between 70% and 85% (by volume) is recommended because it ignites more easily at higher concentrations. Ethanol vapours are less irritating to the eyes and mucous membranes and are not absorbed through the skin. Ethanol kills bacteria (e.g. tubercle bacilli), fungi and viruses (e.g. HIV, hepatitis B and C), but it has no effect on spores. Ethanol is easily inactivated by organic matter. Surfaces must therefore be cleaned prior to disinfection with ethanol." For safety reasons we recommend that instructions for use are made for the specific area of use.
